Bug Report

Jira / Requirement: ID-1234

1.

Title: Form allows to fill the Birth Date with future date

Type: Bug

Priority: Medium

Components: Forms_Application

Labels: Sprint12

Environment: LR_Test

Severity: Major

Description:

Steps to replicate the scenario

-Open the Forms Application (link)

-Fill the field: "What is your name?"

-Fill the field: "Why did you join the testing area?"

-Fill the filed: "What is the date of your birth?"

Actual result: Form allows to provide date in the future as birth date.

Expected result. Ideally, future date shouldn't be the case to provide as birth date. I would expect to have restriction to be able to fill till current date only.

Screenshot attached:

Jira / Requirement: ID-1234

2.

Title: Form allows to fill the User Name with any spacial character

-- I would't raise bug for this, but would confirm the expected behavior by the Product Owner (or the Business Analyst maybe).

Description:

Steps to replicate the scenario

-Open the Forms Application (link)

-Fill the field: "What is your name?"

Actual result: Form allows to provide any special character as a User Name

Expected result. If we talk about a Tech User, it is absolutely fine. But if we consider our new Colleagues only, then it should be restricted to not allow special characters, numbers in the name. Also can't be started / ended with blank character (space).

3.

Title: Mandatory fileds still keep the red star after filling them with valid values.

-- I would't raise bug for this, but would confirm the expected behavior by the Product Owner (or the Business Analyst maybe).

Description:

Steps to replicate the scenario

-Open the Forms Application (link)

-Fill the field: "What is your name?"

-Fill the field: "Why did you join the testing area?"

-Fill the filed: "What is the date of your birth?"

Actual result: Mandatory fileds still keep the red star after filling them with valid values

Expected result. Once a mandatory field filled with valid value, red star could be changed to grey star, to show no more action needed by User for that particular field. It would increase User experience (UX).

Screenshot attached:

This is the first page of our forms.
Let's party rock.

What is your name? *

Test User

What is the date of your birth? *

10/10/2010

Why did you join the testing area? *
